

THE CEO'S GUIDE TO Co-Managed I.T.

**A Far Superior Approach To Lowering The Risk,
Difficulty and Cost Of I.T. Support, Cyber Security
And Compliance For Your Growing Organization**

The Dilemma: The Rising Costs Of I.T. And Cyber Security

Every day, CEOs and their executive teams are faced with tough investment decisions about where to allocate their financial resources.

Some of those decisions are easier to make than others because they can be based on logical financial analysis with safe ROI expectations. Investing in marketing, a new product line, an acquisition and strategic hires all build equity and future profits. These investments are relatively safe and dependable.

However, CEOs must also deal with a new category of investments that refuse to behave typically and often don't easily secure a direct ROI. These investments involve I.T. (which we'll define as all aspects of information technology, data protection, security and compliance), and they are growing in number, breadth and scope – and over the last decade have been steadily increasing at an exponential rate as cybercrime rages, compliance regulations are introduced and I.T. talent continues to be in short supply.

As you know, I.T. investments are more difficult to estimate, and the ROI or benefit might not be obvious or easily measured. In fact, you hope some investments NEVER produce a tangible ROI, like those in cyber security and disaster recovery protections. However, no company can afford to lag behind in I.T. There's not a single department or function of your organization that isn't significantly controlled by, enhanced by, facilitated by and outright dependent on I.T.

Further, if your organization is NOT properly invested in cyber-protection and backup technologies, a single cyber-attack or data-erasing event could have serious, long-lasting, costly ramifications – or even put you out of business. Today, insurance providers are putting stricter requirements on all companies to get simple cyber liability, crime or other policies that would cover the costs of a data breach or hack that severely impacts the business.

But no one has unlimited funds. **So, what do you do about all of this?**

One option is to ignore it. Keep the status quo, make do with the I.T. staff and technology investments you have today (regardless of how old and antiquated they are) and “hope” everything is going to be okay. Trust that your current I.T. department or individual “has it handled.” **But you have to know this is a perilous tightrope.** People in New Orleans trusted the dams and levees to hold – and they did – *until* they were hit with a Category 5 hurricane.

Your “Category 5” might be a ransomware attack that locks your entire company’s data down, inaccessible even from your backup. It could be a rogue employee who intentionally sabotages your organization by deleting data or selling it to a competitor. It might be a failed server that went down, taking all its data with it, never to be revived again. It might be a corrupt SQL database that is beyond your current I.T. team’s expertise to fix.

Maybe your I.T. department truly does “have it all covered.” *Maybe.*

But if you are like most of the CEOs we work with to deliver co-managed I.T., your I.T. person or department is significantly understaffed, overwhelmed and simply not able to keep up with the growing demands your company is putting on them. They also may be lacking in specialized knowledge about any number of things – data backup and disaster recovery, cyber security protections, secure cloud computing, complex database management and more.

No one I.T. person can do it all or know it all.

I.T., cyber security and compliance are far too complex for one person to know it all. Like doctors, I.T. teams need specialists. An oncologist can’t also be a dentist, ob-gyn, dermatologist and general doc – and a dentist shouldn’t be trusted to treat cancer. And if you’re making the mistake of putting ALL of your I.T. into the hands of one person or a few people, you are making this mistake as well.

If you only have a few people in your I.T. department, you might NOT be as prepared and capable as you may think to handle the rising complexity of I.T. systems for your growing company, the need to meet strict and growing compliance regulations AND the overwhelming sophistication of cyber threats with the current resources, time and skill sets your I.T. team has.

If true, **your organization IS AT RISK for a significant I.T. failure**. To be crystal clear, I’m NOT suggesting your IT lead and staff aren’t smart, dedicated, capable, hardworking people.

Fact is, NOBODY likes to go to the CEO with “bad news” or to constantly ask for more money or help, particularly if they’ve already been told “there’s no budget.” It may be uncomfortable or even embarrassing for them to admit they don’t have it all covered or they’re lagging behind, not getting things done as well as they could *because* they’re just crushed with putting out fire after fire.

Further, it takes a small army to run an I.T. department for a company of your size and growth – and you may be unfairly expecting too much of them, setting them up for failure.

Signs That You May Be Pushing Your I.T. Leader And/Or Department To The Limit

For the reasons stated above, conscientious I.T. leaders and staff often WON'T tell you they need more money, more staff, more help. They are trying to be good stewards of your company and budget – so it's up to YOU as the leader of your organization to ensure you are not setting them up for failure or burnout.

Here are 4 early warning signs that you may be pushing your I.T. department too hard:

1

They're routinely working nights and weekends.

Everyone pulls an extended shift once in a while when a deadline is looming or due to a seasonal surge. But if your I.T. leader and department are ROUTINELY working nights and weekends to catch up, that's a sign they are understaffed, which can lead to an unhealthy workplace environment, exhaustion and burnout. It can also lead to important details being skipped and mistakes being made.

You might not even realize this is happening, so ask them. *How often are you working overtime to get things done? How caught up are you on major projects?* It's not uncommon for I.T. staff to be stressed to the max without the CEO/CFO even knowing about it. **This will end up hurting your organization.**

2

Projects aren't getting done on time or correctly.

Most CEOs aren't technically savvy, so it's difficult to know for certain if a project is taking longer than it should, costing more than it should. All too often, a manager will jump to the conclusion that the employee is incompetent or lazy – but that may not be the case at all. It could be they're so overwhelmed with tasks and putting out fires that they can't GET the time to do the project properly.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

3

Heightened emotional display, aggression or resentment.

Some employees will “suck it up” and push through, not wanting to talk to you about desperately needing more help. Or maybe they HAVE brought it up, only to be shut down and told “there’s no money.” When this happens, it’s easy for an employee to become resentful. You might think that emotion and work don’t mix, but your employees are only human and will only tolerate so much.

4

They aren’t rolling out preventative security measures.

Has your I.T. leader rolled out any type of end-user security awareness training? Do they enforce the use of strong passwords and compel employees to change their passwords routinely? Have they put together an Acceptable Use document or training to make sure employees know what is and isn’t allowed with company e-mail, Internet, confidential data, etc.? Have they given you updated documentation on the network and an up-to-date disaster recovery plan?

All of these are essential preventative maintenance that often gets neglected or ignored when an I.T. person or department is overwhelmed – but these are critical for insurance purposes and reducing the chances of a cyber-attack or other disaster that would carry significant financial losses and/or hurt your company’s reputation.

please visit www.CIOLanding.com or
call our office at 847-868-9253.

This May Be One Of The Biggest Dangers You Face

Without a doubt, the one area you are most at risk for with an overwhelmed and understaffed I.T. department is cyber security. One incident can lead to data loss, extended downtime and (potential) liability with a cyber security breach or compliance violation.

As I stated above, the FIRST thing that gets left undone when projects loom and there are multiple fires to put out is preventative maintenance. If your employees are running into your I.T. team's office every five minutes needing a password reset or needing help getting their e-mail, it's hard to tell that employee "No" because the I.T. team is working on server maintenance or updating critical documentation.

It's the classic "important, not urgent" work that gets neglected.

To make matters worse, the complexity of knowing how to protect your organization against cybercrime and how to be in compliance with new data privacy laws is growing exponentially. These matters require SPECIALIZED knowledge and expertise. They require constant monitoring and attention. CORRECT solutions. Regardless of your organization's size or industry, these are areas you cannot ignore or be cheap about.

In situations where companies were fined or sued for a data breach, it was their WILLFUL NEGLIGENCE that landed them in hot water. They knowingly refused or failed to invest in the proper I.T. protections, support, protocols and expertise necessary to prevent the attack.

You'd be foolish to underestimate the cost and crippling devastation of a complete, all-encompassing systems failure or ransomware attack. You don't want to dismiss this with "It won't happen to us." And you certainly don't want to underestimate the level of expertise you need.

One innocent mistake made by an employee. One overlooked patch or update. One missed backup can produce EXTENDED downtime, data loss, business interruptions.

Yes, your I.T. department is probably doing everything they can to protect you – **but it's up to YOU to be certain.** Everyone in your company – including your clients – is depending on you.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

Exactly How Can Your Company Be Damaged By Failing To Invest Properly In Cybercrime Prevention And Expertise?

Let Us Count The Ways:

1

Reputational Damages

When a breach happens, do you think your clients will rally around you? Have sympathy? This kind of news travels fast on social media. They will demand answers: HAVE YOU BEEN RESPONSIBLE in putting in place the protections outlined in this report or will you have to tell your clients, “Sorry, we got hacked because we didn’t think it would happen to us,” or “We didn’t want to spend the money”? Is *that* going to be sufficient to pacify those damaged by the breach?

2

Government Fines, Legal Fees, Lawsuits

Breach notification statutes remain one of the most active areas of the law. Right now, several senators are lobbying for “massive and mandatory” fines and more aggressive legislation pertaining to data breaches and data privacy. The courts are NOT in your favor if you expose client data to cybercriminals.

Don’t think for a minute this only applies to big corporations: ANY small business that collects customer information also has important obligations to its customers to tell them if they experience a breach. In fact, 47 states and the District of Columbia each have their own data breach laws – and they are getting tougher by the minute.

If you’re in health care or financial services, you have additional notification requirements under the Health Insurance Portability and Accountability Act (HIPAA), the Securities and Exchange Commission (SEC) and the Financial Industry Regulatory Authority (FINRA). Among other things, HIPAA stipulates that if a health care business experiences a breach involving more than 500 customers, **it must notify a prominent media outlet about the incident.** The SEC and FINRA also require financial services businesses to contact them about breaches, as well as any state regulating bodies.

3

Cost, After Cost, After Cost

ONE breach, one ransomware attack, one rogue employee can create HOURS of extra work for staff who are already maxed out when things are going well. Then there’s business interruption and downtime, backlogged work delivery for your current clients. Loss of sales. Forensics costs to determine what kind of hack attack occurred, what part of the network is/was affected and what data was compromised. Emergency I.T. restoration costs for getting you back up, *if that’s even possible.* In some cases, you’ll be forced to pay the ransom and maybe – *just maybe* – they’ll give you your data back. Then there are legal fees and the cost of legal counsel to help you respond to your clients and the media. Cash flow will be significantly disrupted, budgets blown up. Some states require companies to provide one year of credit-monitoring services to consumers affected by a data breach, and more are following suit.

According to the Cost of Data Breach Study conducted by Ponemon Institute, the **average cost of a data breach is \$225 per record compromised, after factoring in I.T. recovery costs, lost revenue, downtime, fines, legal fees, etc.** How many client records do you have? Employees? Multiply that by \$225 and you'll start to get a sense of the costs to your organization. (NOTE: Health care data breach costs are the highest among all sectors.)

4

Bank Fraud

If your bank account is accessed and funds are stolen, the bank is NOT responsible for replacing those funds. Take the true story of Verne Harnish, CEO of Gazelles, Inc., a very successful and well-known consulting firm, and author of the bestselling book *The Rockefeller Habits*.

Harnish had \$400,000 taken from his bank account when hackers were able to access his PC and intercept e-mails between him and his assistant. The hackers, who are believed to be based in China, sent an e-mail to his assistant asking her to wire funds to three different locations. It didn't seem strange to the assistant because Harnish was then involved with funding several real estate and investment ventures. The assistant responded in the affirmative, and the hackers, posing as Harnish, assured her that it was to be done. The hackers also deleted his daily bank alerts, which he didn't notice because he was busy running the company, traveling and meeting with clients. That money was never recovered and the bank is not responsible.

Everyone wants to believe, "Not MY assistant, not MY employees, not MY company" – but do you honestly believe that your staff is incapable of making a single mistake? A poor judgment? **You don't believe you will be in a car wreck when you leave the house every day, but you still put the seat belt on.** You don't expect a life-threatening crash, but that's not a reason to not buckle up. *What if?*

5

Using YOU As The Means To Infect Your Clients

Some hackers don't lock your data for ransom or steal money. Often they use your server, website or profile to spread viruses and/or compromise other PCs. If they hack your website, they can use it to relay spam, run malware, build SEO pages or promote their religious beliefs or political ideals.

Even worse, they can take your client list and use it to send phishing e-mails and malware to your clients FROM YOU. I'm sure you would agree this would be totally and completely unacceptable – an embarrassing and gut-wrenching event you would NEVER want to have to deal with.

Do you think this could *never* happen? If hackers can break into companies like First American, Facebook and Capital One, they can certainly get into YOURS. The question is: Will your I.T. team be brilliantly prepared to minimize the damages or completely taken off guard?

Co-Managed I.T.: How Growth Companies Are Solving Their I.T. Resource Dilemma

GROWTH companies face the dilemma of needing professional-grade I.T. support but can't reasonably afford to invest in all the tools, software and staff that requires, which is exactly why we created a NEW solution we call co-managed I.T.

In short, co-managed I.T. is a way for CEOs of growing companies to get the helping hands, specialized expertise and I.T. management and automation tools they need WITHOUT the cost and difficulty of finding, managing and retaining a large I.T. staff OR investing in expensive software tools.

This is NOT about taking over your I.T. leader's job or replacing your I.T. department.

It's also **NOT** a one-off project-based relationship where an I.T. company would limit their support to an "event" and then leave your team behind to try to support it (or give you the option of paying them big bucks afterward to keep it working).

It's also **NOT** just monitoring your network for alarms and problems, which still leaves your I.T. department to scramble and fix them.

We offer a flexible partnership that complements your I.T. staff with customized services and tools to protect your network and enhance support. This allows your I.T. team to focus on strategic tasks while we ensure superior performance at a lower cost.

Here are just a few of the reasons why CEOs of similar-sized companies are moving to a co-managed approach:

- **We don't replace your I.T. staff; we make them BETTER.** By filling in the gaps and assisting them, giving them best-in-class tools, and freeing them to be more proactive and strategic, we make them FAR more productive for you. As a bonus, THEY won't get burned out, frustrated, and leave.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

- **You don't have to add to your head count.** Let's face it: overhead walks on two legs. Plus, finding, hiring and retaining TOP talent is brutally difficult. With co-managed I.T., you don't have the cost, overhead or risk of a big I.T. team and department. With our extensive team of technicians, you'll always have someone available to assist – no gaps due to vacations, sick leave, or life changes. You can count on reliable support whenever you need it.
- **You'll get enterprise-level IT tools and support – without the enterprise price tag.** With our co-managed service, your business benefits from advanced automation and management tools that enhance efficiency, streamline issue resolution, and improve communication. These powerful tools, typically costly to acquire independently, are included in our partnership – bringing enterprise-level capability without the heavy investment.
- **"9-1-1" on-site.** In the unexpected event your I.T. leader was unable to perform their job OR if a disaster were to strike, we could instantly provide support to prevent the wheels from falling off.
- **You get a TEAM of smart, experienced I.T. pros.** Our certified experts cover multiple areas of technology, providing specialized support to solve challenges quickly. With our co-managed service, your I.T. lead gains access to this expertise, while our vCIOs meet regularly with your team to align your I.T. strategy with business goals, ensuring technology drives your growth.
- **You'll stop worrying (or worry less!) about falling victim to a major cyber-attack, outage or data-erasing event.** We partner with your I.T. leader to deploy advanced cybersecurity measures, minimizing risks from ransomware and breaches. Our solution includes cybersecurity awareness training and controls to prevent risky action, with proactive maintenance to keep your systems secure and running smoothly.
- **Access to the latest technology and best practices.** Co-managed services give you access to the latest technology without the hassle of research or high costs. We keep your systems secure and optimized, freeing your I.T. team to focus on strategy while we handle daily improvements to keep you ahead.
- **Compliance and risk management.** Our team ensures your I.T. systems meet industry standards, reducing the risk of fines, legal issues, or data breaches. We proactively address vulnerabilities and align your infrastructure with best practices, giving you peace of mind your business is protected.
- **Focus on strategic growth.** By offloading routine tasks to us, your internal I.T. team can focus on high-value projects that drive business growth. Whether it's implementing new technologies, optimizing processes, or supporting your expansion efforts, our partnership frees up your team to concentrate on initiatives that move your business forward.

 call our office at 847-868-9253.

Scenarios Where Co-Managed I.T. Just Makes Sense

Whether your business needs extra support for routine tasks, specialized expertise, or scalable resources during growth, co-managed I.T. offers the partnership to fill in the gaps and keep your operations running smoothly.

Scenario 1:

Your in-house I.T. team focuses on strategic projects like implementing new technologies and supporting business growth. However, they still need help managing routine tasks – such as troubleshooting, software updates, backups, and help-desk support.

With our co-managed services, we handle these day-to-day needs, allowing your IT staff to focus on high-priority initiatives. This partnership ensures smoother operations and keeps your business running securely and efficiently.

Scenario 2:

Your in-house I.T. person shines at help-desk support and assisting employees but may not have the specialized knowledge for advanced cybersecurity, server maintenance, cloud solutions, or compliance requirements. With our co-managed services, we complement their strengths by handling these critical areas, ensuring your business stays protected, compliant, and operating smoothly.

Scenario 3:

Your company is experiencing rapid growth, and scaling IT staff and resources fast is crucial to keep up with expanding operations. Hiring and onboarding a full I.T. team takes time, which can leave gaps in coverage during critical moments. Our flexible co-managed systems stay secure and operational. We help you manage this transition smoothly, allowing your business to grow confidently while you build out a stronger internal I.T. department at your own pace.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

Who This Is NOT For:

Although there are a LOT of benefits to co-managed I.T., it is certainly not a good fit for everyone. Here's a short list of people and companies this won't work for.

X

Companies where the I.T. lead insists on viewing us as an adversary instead of an ally.

As I stated previously, our goal is not to have you fire your I.T. lead or your entire I.T. staff, but some I.T. managers just cannot get beyond this fear.

As I've said, we NEED an I.T.-savvy leader in the company to collaborate with who knows how the company operates (workflow), understands critical applications and how they are used, company goals and priorities, etc. We cannot do that job. Co-managed I.T. only works when there is mutual trust and respect on both sides.

X

I.T. leaders who don't have an open mind to a new way of doing things.

Our first and foremost goal is to support YOU and your I.T. leader's preferences, and we certainly will be flexible – to make this work, we HAVE to be.

However, a big value we bring to the table is our 20+ years of expertise in supporting and securing computer networks. Therefore, the clients we get the best results for are the ones that keep an open mind to implementing our tools, methodologies, and systems, and adopting our best practices. As I said before, this only works if it's a collaborative relationship. But we cannot – will not – take on a client that is doing things we feel compromise the integrity and security of a network, even if "that's how we've always done things" or because "that's what we like."

X

Organizations where the leadership is unwilling to invest in I.T.

As a CEO myself, I completely understand the need to watch costs. However, starving an I.T. department of much-needed resources and support is foolish and risky. Further, some CEOs look at what they are paying us and think, "We could hire a full-time person for that money!" But they forget they are getting more than a single person – they are getting an entire team, a backup plan, tools and software, monitoring and specialized skills.

We can only help those companies that are willing to invest sufficiently in I.T. – not elaborately or indulgently. In fact, we can demonstrate how a co-managed I.T. option is a far cheaper solution than building the same team on your own.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

A Full I.T. Department At A Fraction Of The Cost

To understand how co-managed I.T. saves you money and is a FAR superior choice to building your own I.T. department, you need to understand the structure and skill sets you'll require as a growing organization.

In most cases, you won't need these individuals' expertise 24/7/365 (like the CISO), but you WILL need that expertise, which is why outsourcing is the best strategy for a small or midsize business, especially now that I.T. talent is so difficult to find and expensive to hire.

Title	Purpose	Employees	Salary
Help Desk Technician (Levels 1-3)	Responsible for being the first line of defense to troubleshoot end-users' problems, questions and needs. Must be highly responsive.	1 per 70 employees	\$35,000 – \$50,000
Network Administrator	Responsible for maintaining your company's computer network (designed by the network engineer), ensuring it's up-to-date, secure and operating as intended.	1 per 200 employees	\$55,000 – \$90,000
Network/Systems Engineer	Responsible for the strategic planning and implementation of the communication networks in your company.	1 per 200 employees	\$63,000 – \$100,000
I.T. Manager	Responsible for managing the help desk, network administrator and systems engineer.	1 per 500 employees	\$90,000 – \$150,000
CIO (Chief Information Officer), CTO (Chief Technology Officer)	Most senior technology executive inside an organization. Responsible for setting and leading the I.T. strategy for the entire company to ensure I.T. facilitates the goals of the organization.	1	\$100,000 – \$150,000
CISO (Chief Information Security Officer)	Responsible for being head of I.T. security; creating, implementing and managing a company's I.T. security policies to prevent a breach; meeting compliance requirements and insurance security standards.	1	\$185,000 – \$250,000
Total			\$528,000 – \$790,000

Additional I.T. Tools You'll Need:

- Help Desk Ticket Management System
- Remote Monitoring Software
- Security Software
- Backup and Disaster Recovery Solutions
- Cloud Management Platforms
- Compliance Management Tools
- Mobile Device Management Software
- IT Documentation and Knowledge Management Tools

What To Look For In A Co-Managed I.T. Partner

As mentioned above, other I.T. firms in this area will offer project-based support or monitoring only, or they want to take over I.T. for your entire company, firing your I.T. lead and/or team.

Here's why these options are not smart and won't deliver the value for your money.

For starters, if you have a productive, reliable I.T. leader or department, you want to keep those people on staff but make them more productive. No managed services provider can fully replicate the value that a full-time I.T. lead on your staff can deliver. They will try to sell you on that idea, but candidly, they won't be able to allocate the time and attention that a full-time employee can.

Second, monitoring-only agreements are like smoke detectors. They tell you when a fire is about to happen (or is happening), but they don't do anything to put out the flames, get you out safe or PREVENT the fire from happening in the first place. They are a waste of money UNLESS you have a big I.T. team that just needs that tool – and if that's the case, you'd be better off buying that software direct, not through a reseller who will mark it up.

Finally, project-based work is often necessary, but you are going to get better results if those projects are not a "one-and-done" where your hired I.T. company drops the solution in and takes off, leaving your I.T. team to figure it out.

A better approach is a co-managed I.T. environment when a solution is implemented by the same team that is supporting it.

To Schedule Your FREE Consultation,
please visit www.CIOLanding.com or
call our office at 847-868-9253.

Why We're Uniquely Positioned To Deliver Co-Managed I.T.

We are a partner you can TRUST. We're the team that will stay up into the wee hours of the night fixing a problem. We're the team you can call when an unexpected problem or crisis arises. And because we already know your environment, we can step in at any time FAST.

We are also the **leader in efficient, responsive IT services and support**, with over 20 years of experience helping businesses secure and optimize their technology. At CIO Landing, we go beyond just fixing IT issues; we take a proactive approach to understand your business today and prepare it for tomorrow. Our team specializes in not only managing IT but also providing strategic CIO oversight that fosters growth and security. We currently serve over **80+ businesses in Chicago** and have built a solid reputation for excellence and reliability. But that's not all we do. We are also the **preeminent experts in cybersecurity** – second to none in our thorough understanding of how to protect networks from data loss, ransomware, cloud vulnerabilities, and more. Our award-winning services ensure that our clients are protected and positioned to thrive in an increasingly digital world.

I have invested thousands of dollars and over 20 years in developing the most efficient, robust, and responsive I.T. support system so you don't have to. The co-managed I.T. support we can wrap around you will dramatically improve your effectiveness and the quality of your I.T.

call our office at 847-868-9253.

Think Co-Managed I.T. Is Right For You?

Our Free Diagnostic Consultation Will Give You The Answer

If this letter resonates with you, we'd love to schedule an initial conversation with you and your I.T. leader to explore whether a co-managed I.T. partnership is the right fit for your business. During this call, our senior leadership team will assess your current situation and discuss how our services can align with your needs, budget, and goals to support your growth effectively.

We work with your I.T. lead to determine areas that are lacking and to unearth potential problems such as 1) inadequate or outdated cyber security protocols and protections, 2) insufficient backups, 3) unknown compliance violations, 4) workloads that can be automated and streamlined for cost savings and more efficiency, and 5) insufficient (or no) documentation of I.T. systems and assets.

These are just a few of the most frequently discovered problems we find that virtually everyone denies could exist in their organization.

We can also answer questions you might have, such as:

- **Is my I.T. person or team 100% utilized, efficient and as productive as they should be?** We have professional tools that will give you visibility into their activities and allow you to track time against work, as well as how efficiently they are performing their job, what activities they are spending the most time on and whether or not they are maxed out, based on tangible data.
- **Do I have sufficient redundancy and documented systems and processes in my I.T. department to avoid a single point of failure?**
- **Am I overspending and not getting my money's worth in any aspect of I.T.?**
- **Am I TRULY prepared and protected against a ransomware attack or other cyber security breach? Could I recover quickly? Am I meeting compliance regulations?**

The above is NOT designed to make your I.T. team look bad; as we all know, fresh eyes see new things. Your team is also very unlikely to have the software tools we can provide that would give them insights and help them be FAR more effective for you. All of this will be discussed during this consultation.

To Request This FREE Consultation:

1. Go online to www.CIOLanding.com.
2. Call us direct at 847-868-9253.
3. E-mail your appointment request to sales@ciolanding.com.

One Important Request

We STRONGLY encourage you to bring your I.T. lead into this Diagnostic Consultation so they can discuss where they feel they need the most help and where your I.T. department is underutilized.

Even if you prefer that we work with your I.T. leader direct, I also urge you to be involved. I realize that I.T. is not something you might fully understand and that you are up to your neck in critical projects and deadlines – but decisions about allocating resources and budget DO require your approval and attention.

Therefore, please note that we are happy to conduct a diagnostic evaluation working mostly with your I.T. lead but would request you be involved, at some level, in looking at what we discover and propose.

We look forward to working with you and your team.

Sincerely,

Juan Carlos Bosacoma
CEO
CIO Landing, Inc.

PS – If you would like to speak with any of our CEO clients who are utilizing our co-managed I.T. services, please e-mail me at jc@ciolanding.com or call me at 847-868-9258 and I'll arrange for you to speak with them direct.

To Request Your FREE Consultation:

1. Go online to www.ciolanding.com/co-manage-service and complete the form.
2. Call us directly at 847-868-9253.
3. E-mail your appointment request to sales@ciolanding.com

What Do Other CEOs In Chicago Say?

Technology Expertise, Strategic Perspective

We were challenged with our maze of security and technology having a large deployment of PC's and servers across 20 states. CIO Landing was able to step in and make sense and fix what we had. We are very pleased with the quality of support and technology expertise they have brought to our company. They find ways to not only address our technology challenges but also save us money through their partnerships. Their perspective is strategic and long term. We highly recommend them!

– Paul Diamond, CEO, Diamond Residential Mortgage Corporation

Solved Problems Others Could Not

We have been using CIO Landing for several years and they have provided us with services and solutions others have not been able to do. Their technical capabilities are superior! We recommend them not only for their technical capabilities but also for their great customer service.

– Jaime Rojkind, CEO, Rolei Financial

Exceeded Expectations, Cutting-Edge Technology

I recently had the pleasure of working with CIO Landing, and I can confidently say they exceeded my expectations in every way. Their ticketing system is incredibly helpful in keeping track of all maintenance requests and responses, ensuring that nothing falls through the cracks. I highly recommend CIO Landing to anyone looking for exceptional services and cutting-edge technology.

– Tom Hudson, CEO, Peregrine Enterprise LLC

Tailored Solutions, Indispensable Partner

Since we engaged CIO Landing's services, they have become an invaluable partner to our legal firm. One of the most impressive things about CIO Landing is their dedication to providing personalized and tailored solutions. We are grateful for their expertise, professionalism, and commitment to excellence.

– Edward J Vrdolyak, Managing Partner, Vrdolyak Law Group

What Do Other Executives In Chicago Say?

Enabled Us to Focus on Our Core Business

CIO Landing has enabled us to focus on our business by providing us with infrastructure and support without us having to worry how it all gets done. Their helpdesk team is always available and very responsive. We highly recommend CIO Landing.

– Joe Solimini, COO, Ukrainian Catholic Education Foundation

Responsive, Timely Support, Painless Compliance

We hired CIO Landing because we needed an IT company that is responsive. They also made our SOC2 process painless and did most of the heavy lifting with user computer compliance as well as managing browsers, and password managers, and ensuring people use them. CIO Landing is great, I am very happy with their services. Definitely glad we chose them as our IT provider.

– Adam Ben Jacob, COO, OneStepGPS

Terrific Job, Invaluable Partner

Our practice has been with CIO Landing since our inception over 10 years ago. They did a terrific job setting us up with the needed protections and systems, have worked with us closely all this time handling all of our information technology needs, and have been invaluable in quickly addressing both minor and major issues that have come up over the years. I would recommend them without any hesitation.

– Robert Herst, Owner, Law Office of Robert L Herst LLC

Long-Term Strategic Partner

We have worked with CIO Landing for more than 15 years to provide us with full IT support, which includes maintaining our system security and network monitoring.

– Marc Siegel, Owner, Marc J. Siegel Law
